INNOVATIVE SOIL REMEDIATION SOLUTIONS

- Unique All-in So(i)lutions
- Proven (and) Sustainable
- Cost Effective
- International
- Safety

Unique and complete So(i)lutions

GreenSoil offers our clients **complete solutions** for complex soil and groundwater contamination. Our team of engineers (>150 years of experience) realizes soil remediation projects from A to Z. As **general contractor** GreenSoil takes responsibility as well financially as technically to take soil remediation projects to completion. We offer **customized solutions** taking into account the client's needs or its stakeholders to a maximum extent.

Proven (and) Sustainable

The methods that we apply in our remedial concepts are **proven** techniques at many sites. Sustainability starts with a reliable remedial concept whereby the stimulation of naturally occurring, **biological** degradation processes plays a central role. Sustainability is also reflected in our **biological treatment systems** for air, water as well as soil. Our biological techniques excel in their low **CO2 footprint** compared to conventional/other techniques.

Cost efficiency

Our methods are not only sustainable but also cost efficient especially in highly impacted, complex situations. Innovative and pro-active thinking in conceptual stage, allows Greensoil to offer competitive and **cost efficient** alternatives. Greensoil is willing to offer **lump sum, guaranteed outcome contracts**, which gives clients sufficient certainty of both costs and meeting cleanup targets.

International network

Our broad international network allows us to conduct soil remediation project **worldwide**. Greensoil works in close collaboration with **strategic partners** for the implementation and completion of its remediation projects. Our partners are carefully selected to safeguard best practices always under supervision of highly qualified Greensoil personnel.

Safety

Safety is a core value within our company and reflected in our safety management system. Greensoil is **VCA** certified. Client surveys and external auditing prove Greensoil continuously acts at **high safety standards!**

Clean Soil

From (chlorinated) hydrocarbons, PAHs, metals to unknown contaminant types, GreenSoil is able to find a solution for a **broad range of contaminants**. We will find a suitable solution even for relatively unknown and complex contaminations. Our highly qualified team of soil specialists does not step away from a challenge! Do you have an impacted site? Then we're happy to assist! Feel free to **contact us** for further information or a free quote.
